## Conserve energy with Madico window films.

Installing Madico window films is a smart and cost-effective way to reduce energy costs. Our films reject up to 80% of solar heat in summer months, while helping to retain interior heat in cooler months, saving money on heating and cooling costs all year long. In addition, Madico window films reduce CO<sub>2</sub> emissions through increased energy efficiency and regulate the temperature disparity between the sunny and the shady areas of your facility, eliminating hot and cold spots.

## Added safety where you'd expect it.

Violent storms. Terrorist attacks. Vandalism. All of these events can cause massive damage to airports and airport businesses, and in many cases, can prove lethal. For over 30 years, Madico has engineered window films to protect against everything from criminal acts, to catastrophic events.
